

Evaluation research

As a profession evaluation is relatively young. We try to contribute to the development of its theory and methodology by doing research about evaluation, taking an active part in scientific events and conferences and publishing on the german page (in German language mostly) . Up-to-date methods and approaches to evaluation are continuously added to our line of action.

Among the products resulting from our work that you might want to use are the [`Eval-Wiki: Glossar der Evaluation`](#) (glossary including English and French translations, descriptions and references to approximately 420 technical terms of evaluation) as well as the logic model [`Programmbaum`](#) ([programme tree](#)).

Read more about the [tools](#) we place at your disposal at our website.
